

The Delage D12 can be converted into a Speedster or an "F1" (optional)

Magny-Cours (September 2, 2022) – The French manufacturer Delage-Automobiles innovates and allows owners of the D12 Hypercar to be able to easily convert their car into a Speedster or an "F1".

The manufacturer of the French Hypercar "Delage D12" has developed an innovative and unique system in the world of Hypercars: The possibility of converting the Delage D12 coupe into a Speedster or an "F1".

The operation requires less than ten minutes for two people. It consists of removing the fighter-jet type canopy from the coupe, and replacing it either:

-by a little smaller windshield, transforming the car into a Speedster.

-by a wind deflector, transforming the car into an "F1". This modification is accompanied by a protective halo and a very high-end helmet, which the client is free to install/wear if he wishes.

The "Speedster" option is invoiced at EUR 190,000 excluding tax. Same for the "F1" option including the halo and the helmet. The "all conversions" option, which includes both the Speedster option and the "F1" option, is invoiced at EUR 260,000 excluding taxes.
